Acting responsibly –
sustainable heating

WELCOME

Welltherm GmbH is one of Europe's leading companies in the field of electric heating. At our development and production site in Lüdenscheid, we manufacture high-quality infrared and electric heating systems. Carefully selected components, meticulous workmanship, and customized production of our products promise optimal and sustainable heating comfort.

Our production facility in Lüdenscheid, certified according to DIN EN ISO 9001:2015, is proof of our commitment to the highest quality and product safety.

In addition, we were one of the first manufacturers to receive the EIHA seal of approval.

Expertise and decades of experience in the development and manufacture of heating elements for industrial applications (including laboratory equipment, medical technology, and the automotive industry) set us apart and form the basis for the highest quality and innovation standards of our infrared heating systems.

This expertise was and is the basis for Bajas to develop and continuously improve the most efficient and high-quality heating systems.

We guarantee precise temperature control and maximum process reliability. The latest technologies, pioneering future visions, and innovative products make us your strong partner in the field of electric heating.

EIHA quality seal

Welltherm infrared heating systems meet the requirements for the EIHA seal of approval.

1. Radiation efficiency according to IEC 60675-3

The key criterion for the quality seal is radiation efficiency in accordance with the IEC 60675-3 standard. This standard evaluates how much of the energy used is converted into radiant heat. Efficiency is crucial for the performance and cost-effectiveness of heating devices. 40% is the minimum. Welltherm infrared heaters are at the upper limit of all measured manufacturer values. The radiation efficiency under the ceiling differs from that on the wall. In general, the radiation efficiency increases with the surface area and is higher on the ceiling than on the wall.

2. Compliance with EU quality standards

Welltherm infrared heaters meet the requirements of EN 60335-1, EN 60335-2-30, and the regulations for EMC, RoHS, and WEEE. This ensures that the fundamental

European safety, environmental, and quality standards are met.

3. Production monitoring

Production monitoring by TÜV Süd has been part of Welltherm's quality policy for many years. In this context, we ensure that our products are "Made in Germany" in compliance with all standards and certifications.

4. Compliance with the Ecodesign Directive

Infrared heaters must also comply with the requirements of the Ecodesign Directive (2009/125/EC). This directive aims to minimize the environmental impact of products while maximizing energy efficiency.

Welltherm complies with the Ecodesign Directive

Welltherm infrared heating systems are designed to transfer heat within a closed room in which the device is located in such a way that a specific temperature level that is comfortable for humans can be achieved and maintained. For this type of room temperature control, the environmentally friendly design of the devices used is determined by Regulation (EU) 2024/1103 (Ecodesign).

For many years, the Welltherm wireless control system has offered comprehensive energy-saving functions to create comfortable warmth with minimal energy consumption and simple operation. Of course, the Welltherm wireless

control system not only meets the minimum requirements of the Ecodesign Directive, but also achieves the best possible rating currently available through the use of a window contact switch, a router, and a thermostat with adaptive control of the start of heating. The combination of our particularly efficient ESHC+ technology and an ecologically exemplary control system underlines the values we stand for at Welltherm: responsible action and sustainable heating.

Quality - Made in Germany

“Made in Germany” is recognized worldwide as a seal of quality for the highest standards. Our heating systems are also handmade and tailor-made products of the highest quality and value. We rely on a combination of state-of-the-art technology and traditional values to achieve the perfect result for our customers. It goes without saying that all our heating systems meet the legal requirements and have been awarded the relevant test marks for safety, compatibility, and environmental standards with regard to the materials used.

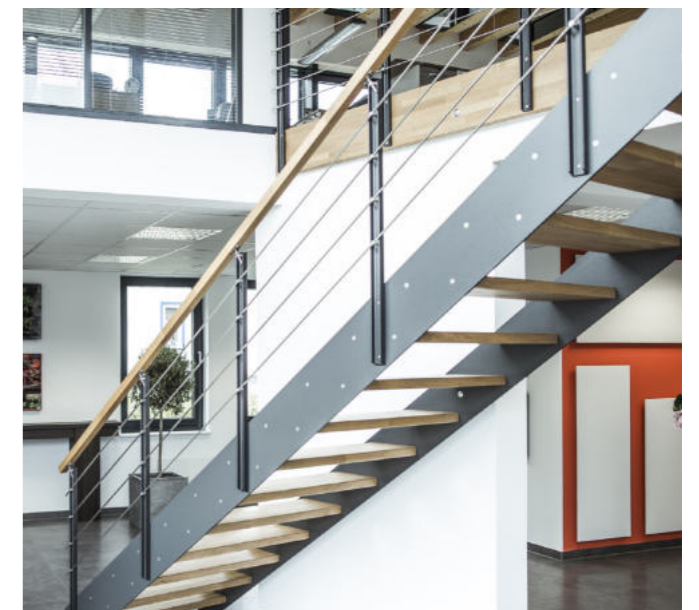

Our heating systems consist of carefully selected components from manufacturers and suppliers in Germany and are manufactured at our production facility in Lüdenscheid in the Sauerland region. In production, we focus on

the essentials and gear our technology towards people and their needs. We place emphasis on durable and environmentally friendly products. During manufacturing, we place particular emphasis on energy efficiency, the recyclability of materials, and the environmental compatibility of the components used.

Our customers appreciate the exceptional quality of Welltherm products, the transparency of the production process, and the opportunity to purchase unique items. High-quality materials, meticulous workmanship, and attention to detail make our products truly special. Welltherm infrared heating systems are 100% “Made in Germany,” tested, and certified.

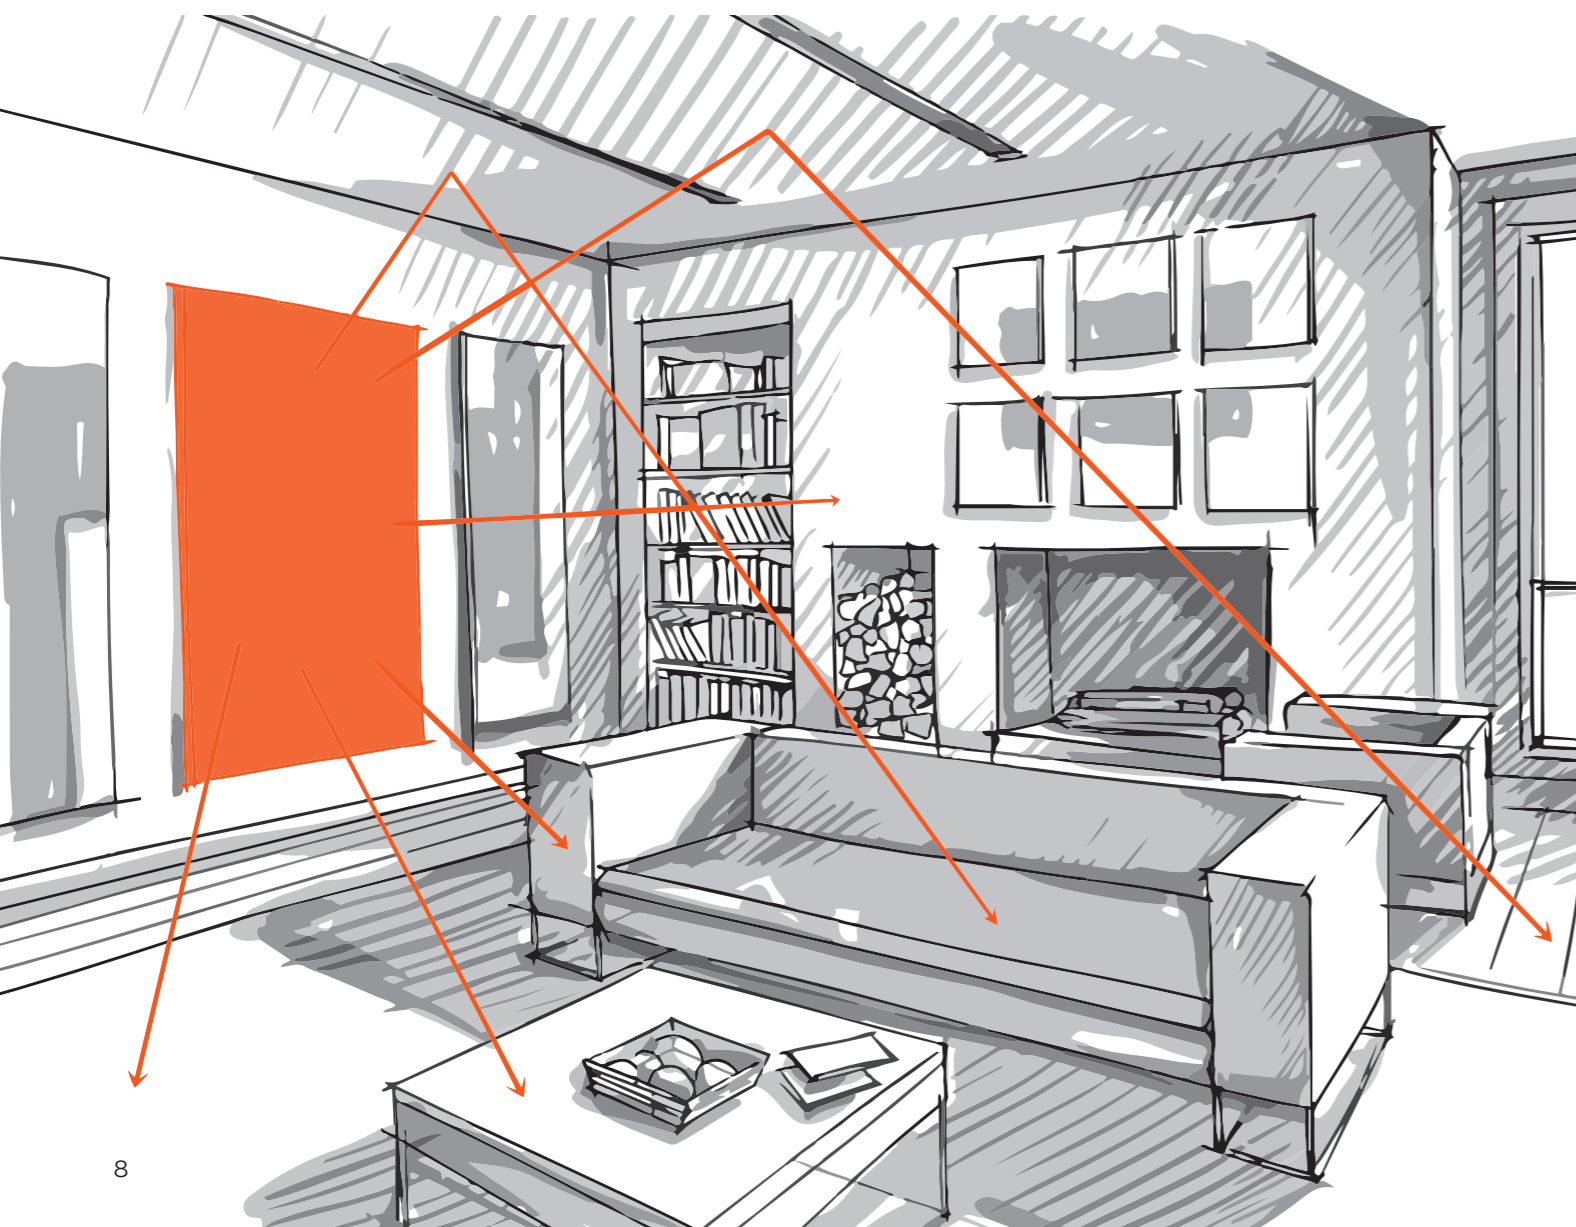

5-year warranty

The infrared principle

Infrared heating is an electric heating system based on radiant heat. It is also known as thermal wave heating or radiant heating and, similar to the sun, generates particularly pleasant direct heat. The main difference to a conventional heating system is that infrared heating does not heat the air in the room, but rather the surrounding room envelope—i.e., the walls, floor, and objects in the room.

It is precisely this principle that makes infrared heating so popular: the even distribution of heat to the room surfaces creates a particularly comfortable and healthy climate. The heat does not move through the room, but is continuously emitted from the surrounding surfaces. At the same time, infrared heating is characterized by low acquisition costs, a wide variety of designs, and very high efficiency.

The most efficient technology for sustainable heating

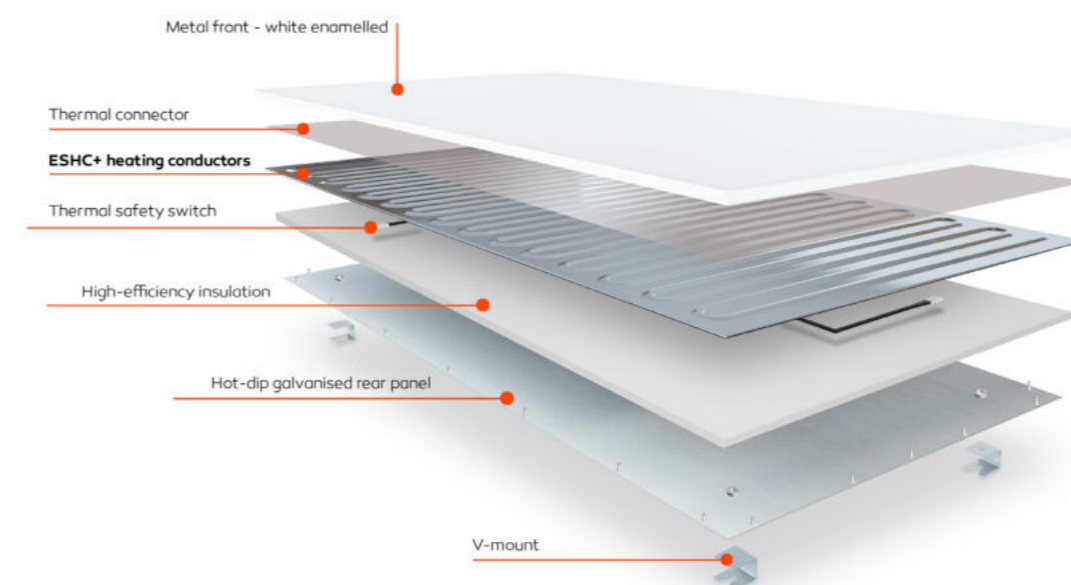

At Welltherm, we take our responsibility towards the environment and our customers seriously. This motivation led us to develop our ESHC+ technology, which is the basis of every Welltherm infrared heater and enables unparalleled efficiency.

Welltherm infrared heaters with ESHC+ achieve top marks in terms of heating time and maximum achievable temperature, resulting in outstanding radiation efficiency.

This makes Welltherm heaters among the fastest and most efficient heating systems available on the market. The very short heating-up time of ESHC+ technology guarantees fast and comfortable heating in living areas. A fast heating system pays off, especially in bathrooms where heat is only needed temporarily, as it en-

ables energy-saving, short preheating times. In addition, Welltherm's intelligent wireless thermostats feature adaptive control of the start of heating, enabling them to reach the desired comfort temperature at exactly the desired time with only minimal lead time.

This creates the perfect combination of efficient heating technology and intelligent control, enabling high comfort at low operating costs. The superiority of ESHC+ technology is mainly due to its maximum temperature of 107 °C. While comparable infrared heaters usually reach a maximum of 95 °C, Welltherm utilizes the high heat radiation effect that can be achieved in the upper temperature range of an infrared heater, thus achieving maximum heat in relation to the electrical energy used.

Wir sind für die revolutionäre ESHC+ Technologie unserer Infrarotheizsysteme offiziell zum Weltmarktführer ausgezeichnet worden.

Metal Infrared heaters

Welltherm powder-coated metal heaters have a very high heat utilization value thanks to their specially coated surface. They are lightly textured, stove-enamelled white, and therefore very scratch-resistant and color-fast. The heater features our particularly robust and durable ESHC Plus heating element, which heats the entire surface.

Special thermal insulation makes Welltherm metal heating a highly efficient and sustainable heating system, while also reducing heat loss at the rear.

All heating variants are frameless. Whether vertical, horizontal, or simply square, our radiators can be mounted in any position, even suspended from the ceiling. Thanks to their mounting mechanisms, they offer a stable, secure hold. Naturally, our metal infrared heaters comply with all applicable safety regulations and are TÜV-approved.

Features:

- Slim design, 16 mm thick
- Small wall clearance, approx. 46 mm
- Frameless
- Vertical and horizontal wall mounting possible
- Ceiling mounting possible
- Silk matt baked enamel finish
- Fireproof galvanized housing
- Two integrated thermal safety switches
- Highly efficient rear insulation
- 1850 mm connection cable with Schuko plug

Glass Infrared heaters

Welltherm Glass Infrared heaters combine stylish design with maximum efficiency. By combining high-quality, permanently heat-resistant ESG safety glass with its selected surface structure and our ESHC+ technology, we achieve maximum values in terms of radiation factor and radiation proportion. This reduces energy consumption and minimizes operating costs. All heating variants are frameless.

Choose your infrared heater to suit your individual preferences. Whether satin white, practical mirror, or elegant matte black, our infrared heaters blend discreetly into your interior design or add deliberate accents.

Our radiators are available in portrait and landscape formats as well as square and can be mounted in any position, even suspended from the ceiling. Intelligent mounting mechanisms provide a stable, secure hold. Naturally, our glass infrared heaters comply with all applicable safety regulations and have CE approval.

Features:

- Slim design, 22 mm thick
- Small wall clearance, approx. 50 mm
- Frameless
- Vertical and horizontal wall mounting possible
- Ceiling mounting possible
- High-quality single-pane safety glass with heat soak test (ESG-H)
- Glass edges with C-cut
- Rounded corners (radius 5 mm)
- Fireproof galvanized and black stove-enameled housing
- Two integrated thermal safety switches
- Highly efficient rear insulation
- 1850 mm connection cable with Schuko plug

Technical specifications:

Voltage: 1/N/PE 230 V
Frequency: 50 Hz
Protection class: IP X4
Protection category: I
Heating technology: ESHC Plus
Certificate: CE approval

GLASS

Glass-Infrared heaters - the perfect combination of efficiency and design

Infrared-Bathroom radiator

The infrared bathroom radiators from the BKW Plus Series offer an unprecedented variety of options. In addition to numerous colors and sizes, the heaters can be equipped with solid yet elegant towel rails in various lengths.

Take the liberty to realize your own individual ideas. Whether you prefer a simple design with matte surfaces, an elegant look with a glass front, or a purist black or sand color—the range of possibilities is enormous. Everyone is guaranteed to find the right solution for them here.

But the BKW Plus Series isn't just visually appealing—Welltherm bathroom radiators also impress with their technical features. The integrated dual heating system combines the convenience of energy-optimized towel drying in the lower part of the radiators with powerful room heating in the upper part.

Of course, all radiators in the BKW Plus Series meet the requirements of Zone 2 (IPX4) and can therefore be used right next to a shower or bathtub.

Comfort:

- Simple control via a single room thermostat, which centrally controls both heating zones of the dual heating system.
- Adjusted heat output for energy-optimized towel drying in the lower part of the heater.
- Efficient room temperature control via a powerful heating element in the upper part of the bathroom radiator.
- Wide variety of options in terms of power, size, color, and surface finish, with a total of 3 different towel rails (can be mounted on the left or right).

Bathroom radiator Metall Sand

Technical specifications:

Front: Metal, stove-enameled
Model: BP Meta
Color: Sand
Surface: Textured
Voltage: 1/N/PE 230 V
Frequency: 50 Hz
Protection class: IP X4
Protection category: I
Heating technology: ESHC Plus, dual heating system
Connection cable: 1850 mm, white
Schuko plug: Yes
Mounting: Wall

Item No.	Color	Surface	Dimensions (cm)	Power (W)	Amperage (A)	Weight (kg)	Possible hangers
BPSA0550	SandColorn	strukturiert	60,0 x 120,0 x 1,7	550	2,4	14,1	1
BPSA0660	SandColorn	strukturiert	60,0 x 150,0 x 1,7	660	2,9	18,7	2

This product must be supplemented by a controller in order to meet the mandatory ecodesign requirements of EU Regulation 2024/1103. (p. 50 ff)

Infrared-Radiant heater

Welltherm also offers smart and energy-efficient heating solutions for outdoor areas and temporarily used spaces such as garages, conservatories, and production halls.

Welltherm infrared heaters are very powerful and efficient heating devices with a discreet design.

They are available in Klasjak and glass versions. The very short heating phase and unobtrusive, invisible

heat ensure perfect heating of semi-open terraces, loggias, verandas, balconies, conservatories, glass houses, party cellars, garden sheds, and storage and production halls.

For operation that complies with eco-design guidelines and precise control of the room temperature, combine the radiant heater with our DE series wireless thermostat. Optional continuous control is possible using the Vida dimmer via remote control or our app.

Infrared-Special applications

High-temperature heatingen

High-temperature heating systems make it possible to quickly adjust large temperature differences to the desired temperature. This allows rooms with high ceilings to be heated efficiently. Welltherm high-temperature infrared heaters are an ideal heating solution for car dealerships, industrial halls, and gyms for energy-intensive sports such as hot yoga.

Infrared footwell heating for churches

Specially developed for churches, Welltherm infrared footwell heating offers an energy-saving alternative to previous heating systems, which always had to heat the entire air space of the church. Poor insulation values and extreme room heights inevitably lead to enormous energy losses. Welltherm footwell heating, on the other hand, directs heat specifically to the seats of churchgoers, thus efficiently reducing the sensation of cold. Another major advantage is the segmented switching of grouped rows of seats, depending on the expected number of visitors. This completely prevents unused areas from being heated.

Infrared footwell heating for office workstations

Speziell für Büro-Arbeitsplätze entwickelt, bietet die Welltherm Infrared-Fußraumheizung eine einfache und effiziente Lösung bei fußkalten Räumen. Mit wenigen Schrauben und dank der in das Gehäuse integrierten Befestigungswinkel kann die Heizung platzsparend direkt unter den Bürotisch montiert werden.

The floor and thus the entire footwell reach a comfortable temperature during heating, which users can adjust to suit their individual needs. To control the heating, we recommend a plug-in thermostat, which automatically regulates the heating during office hours and ensures a consistently comfortable temperature.

Customized solutions and
special applications
Individual & highly efficient

Infrared-High-temperature heatingen

Efficient heating solutions for special requirements

High-temperature heating systems offer the ideal way to adjust large temperature differences to the desired room temperature in a short time. This feature makes them particularly effective for heating rooms with high ceilings, where conventional heating systems often reach their limits.

Welltherm high-temperature infrared heaters are specially designed to overcome such challenges. They are a first-class heating solution for a wide range of applications:

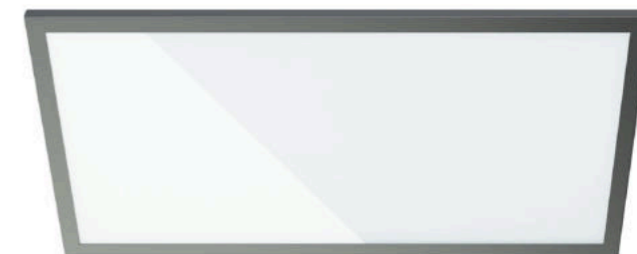

- In car dealerships, they ensure pleasant and even warmth, even in large showrooms.
- In industrial halls, they provide energy-efficient and targeted heating without unnecessary heat loss.
- In fitness studios that focus on specific energy sports such as hot yoga, they guarantee the high temperatures required for an optimal training experience.

With their high efficiency and versatility, Welltherm high-temperature heaters are the perfect choice for demanding environments.

High-temperature heating

Technical specifications:

Model:	High temperature
Voltage:	1/N/PE 230 V

Control engineering

Welltherm infrared heaters offer much more control engineering than a rotary knob with numbers between 1 and 6. Against the backdrop of the energy transition and legal standards such as the Ecodesign Directive, the aim is to achieve the right comfortable temperature at all times, in every room. This makes control engineering—in addition to the noticeable infrared heat radiation—a decisive factor in comfort. It consists of various components. And one of the best things about it is that 95 percent of all applications are controlled wirelessly via radio connections between the thermostat and radio receiver.

Thermostat for temperature measurement (usually one per room):

How much heat should be generated? And where should this heat be generated? A thermostat provides the answer to both questions. In addition to setting the desired comfort temperature, the thermostat can also be placed where the heat is to be generated: in the sitting area, on a wall, or at the dining table. The Comfort thermostat also allows settings for day and night times on a weekly basis, vacations, frost protection, and much more.

Receivers for heating control (one per heater):

The radio receiver translates the thermostat's heat requirement into the current power requirement of the heating system. For example, it ensures rapid heating at the start of the day cycle; when the target temperature is reached, it simply switches off. This ensures that exactly the right amount of electricity is converted into heat at exactly the right time.

Smart accessories:

Whether Welltherm heaters are controlled via an app using a router or whether demand-based control is supplemented by window sensors, Welltherm Control engineering meets all the requirements of a modern heating system compared to many other heating systems. When the desired comfortable temperature is achieved in the right place in the shortest possible time with the lowest energy consumption, comfort meets energy efficiency!

REGULATION

Comfort meets maximum
energy efficiency
Intelligent & innovative

- Comfort:**
- Bis zu 10 Jahre Batterielebensdauer bei normalem Gebrauch
 - Schnelle und einfache Bedienung über den zentralen Drehschalter
 - Option: Steuerung per Smartphone & Tablet
 - Wochen-, Frostschutz- und Partyprogramm
 - Programmierungsintervall in Halbstundenschritten
 - Vollautomatische Sommer-/Winterzeitanpassung
 - Anzeige des Stromverbrauches (kWh) der zugeordneten Heizgeräte
 - Feste Wandmontage oder als Standmodell mittels mitgeliefertem Stecksockel
 - Memoryfunktion bei Batterieaustausch

Temperature control Series WT Fest

Technical specifications:

Transmission: wired (three-/four-wire cable)
 Operating voltage: up to 250 V
 Installation: in 55 mm flush-mounted box
 Temperature setting range: +5 °C... +30 °C
 Operating temperatures: 0 °C... +40 °C
 Protection class: IP30
 Color: white, similar to RAL 9010
 App control: no

Additional features

- Preset and customizable time programs
- Optimum start (temperature is reached at the set time)
- Max. 9 switching times per day
- Short-term timer (party) for hourly temperature changes
- Temperature setting range can be limited
- Energy consumption display

11000120

Room thermostat Series WT Fest

Item No.	Modell	Dimensions (cm)
11000120	Room thermostat WT Fest	8 x 8 x 4,2 cm

All solutions in "Control Engineering Overview" (p. 50 ff)

Dimmer Vida

Technical specifications:

Model: Dimmer Vida
 Voltage: 1/N/PE 230 V
 Protection class: IP 65
 Remote control: Yes
 App control: Yes
 IR remote control
 reception angle: 60° ± 5°
 IR remote control range: approx. 6 m
 Multiple dimmers can be used simultaneously: Yes – individually controllable via app
 Weight: 1.2 kg
 Connection cable: with Schuko plug connection

The Vida dimmer is the ideal plug-in addition to all electric radiant heaters that do not have their own control system. It is simply connected to the power supply via two Schuko plugs and can be controlled using the infrared remote control included in the scope of delivery or conveniently via an app.

The app can also be used to operate several dimmers individually. This means that even larger installations are no problem. Thanks to the external Bluetooth antenna, even long ranges are possible.

The radiant heater can be operated directly on the device, via the infrared remote control supplied, or via the free app. Without question, the most convenient control is via smartphone.

Item No.	Modell	Dimensions (cm)
DVG3000	Dimmer Typ Vida	11,8 x 8,8 x 4,8

All solutions in "Control Engineering Overview" (p. 50 ff)

Overview Control engineering

Temperature control WIRELESS

Our wireless room thermostats offer an intelligent and flexible solution for temperature control. They consist of a wireless room temperature sensor that measures the temperature and acts as a transmitter, and a wireless receiver that is connected directly to heating elements. For eco-design-compliant operation of heating elements, additional window contacts can be integrated for remote control—for maximum efficiency and comfort.

Temperature control WIRE-CONNECTED

Wired room thermostats impress with their simple and reliable functionality. They are wired directly to the heating element and serve as precise room temperature controllers. Thanks to their uncomplicated installation, they are preferred in new buildings or renovation projects, where structural conditions can be optimally taken into account.

Accessories

Welltherm accessories offer you a wide range of options for the ideal installation and flexible mounting of your infrared heating system.

Our well-designed solutions range from ceiling mounting frames and modular LED light frames to mobile stand systems—all developed to make the installation and use of your heating system as comfortable and efficient as possible.

With our innovative accessories, you can optimally align your infrared heating system and use it in a targeted manner.

This not only ensures even heat distribution, but also provides even more effective and energy-efficient heating that is perfectly tailored to your individual needs.

ACCESSORIES

Smart accessories for customized heating solutions

Flexible & versatile

Ceiling mounting frame

Technical specifications:

Modell:	mounting frame
Color:	white, RAL 9003
Surface::	silk matt
Montage:	ceiling

Item No.	Dimensions (cm)	Weight (kg)
EBO60060	60,0 x 60,0	1,5
EBO90060	60,0 x 90,0	1,9
EB120060	60,0 x 120,0	2,2
EB150060	60,0 x 150,0	2,6

Light frame LED

From an energy perspective, positioning an infrared heater on the ceiling is the best option. In the case of renovation or retrofitting, existing wiring can also be easily used. However, the loss of existing ceiling lights deters many builders. That is why Welltherm has developed an LED light frame that (with or without an additional power cable) emits a pleasant warm white, dimmable light to complement the cozy warmth of the infrared heater.

Thanks to its modular design, it is suitable for both metal and glass heaters. It can be mounted on the wall or ceiling. The Light frame is an attractive accessory, especially for wall-mounted mirror heaters.

Benefits:

- Quick and easy retrofitting to wall- and ceiling-mounted infrared heaters using special magnetic holders.
- Efficient, dimmable LED technology with pleasant warm white light.
- Installation either as a fixed connection or wireless version:

Permanent connection:

Light frame is connected to the existing light cable and light switch.

Wireless connection:

Light frame is connected to the heating cable with the heating system. A designer wall switch in a universal 5.0 x 5.0 cm format controls the light.

Light frame LED

LI00060	Schuko connection cable	150,0		-20° - +50°C

- For floor-level installation of Welltherm infrared heaters
- for infrared heaters made of glass and metal with a “60 cm side dimension”
- with and without casters
- Mounting kit consisting of two feet and accessories
- made of high-quality, powder-coated steel

Floor stand

Floor stand rolls

Item No.	Modell	Dimensions (cm)	Material	Color
SF00011	HOR	63,2 x 61,0 x 3,5	High-quality steel, powder-coated	white

Floor stand Classic

Item No.	Modell	Dimensions (cm)	Material	Color
SF00012	HOS	63,2 x 61,0 x 3,5	High-quality steel, powder-coated	white

For mounting the following heating formats:

Typ de calefacción	Item No.	Dimensions (cm)	Power (W)	Amperage (A)	Weight (kg)	Adecuado para habitaciones (m²)
Metal	XX0210	59,2 x 59,2 x 1,7	210	0,9	4,5	3 - 4
Metal	XX0330	59,2 x 59,2 x 1,7	330	1,4	7,8	5 - 7
Metal	XX0340	61,8 x 61,8 x 1,7	340	1,5	8,0	5 - 7
Metal	XX0510	59,2 x 89,2 x 1,7	510	2,2	11,0	7 - 10
Metal	XX0710	59,2 x 119,2 x 1,7	710	3,1	14,0	10 - 14
Metal	XX0910	59,2 x 149,2 x 1,7	910	4,0	17,0	13 - 18
Glass	XX0370	60,0 x 60,0 x 2,2	370	1,6	9,6	5 - 7
Glass	XX0580	60,0 x 90,0 x 2,2	580	2,5	13,5	8 - 12
Glass	XX0780	60,0 x 120,0 x 2,2	780	3,4	17,3	11 - 16
Glass	XX0930	60,0 x 150,0 x 2,2	930	4,0	22,0	13 - 19

- For flexible mounting of Wellther infrared heaters
- Space-saving, vertical mounting possible for many models
- with casters for use in different locations
- Mounting kit consisting of two feet with casters and accessories
- made of high-quality, powder-coated steel

Universal stand

Universal stand
